June 2023

EXECUTIVE SUMMARY

June has been dry than average and cool with high evaporation.
Growth is slow as the temperatures are low and day length is reduced.

This month we have moved into Autumn and are seeing leave change colour and fall off the deciduous trees. We have been removing the old dark fall leave from the surface of lawns and nature strips to prevent shading and smothering of the turf.
Cleaning the gutters and road is a major part of the maintenance at this time of year.

Spring flowering annuals are growing and will soon commence blooming.

Growth in lawn is slow and the colour of the turf is less than desirable due to the temperature.

Leaf fall is continuing and the bulk has been taken away to be composted.
This year the colours have been wonderful and ranges from vivid yellow to dark red.

Mowing of turf is occurring less frequently as the rate of growth is slow. And is carried out to remove dead fallen leaves that results in shading of turf and the shading causes the turf to die and bear spots can be observed.

Crepe Myrtles will be pruned next month in readiness for Spring growth.
