September 2023

EXECUTIVE SUMMARY

September has been dryer than average, with spells of long warm days and below average rainfall.

The season is later than usual as we have not experienced much more warm weather. Many plants have flowered, and other plants will flower in the next few weeks as we head into Spring.

New leaves have started to emerge from bare branches on trees across Raleigh Park and soon whole trees will have foliage.

We have started to remove spent annuals from the round- about and rose garden in readiness for new planting in coming weeks.

Hedge trimming has commenced after the winter lull. Most hedges are producing fresh new growth and look neat and tidy.

Turf across Raleigh Park is healthy and early growth has just started happening, colour is improving with the extra warmth and this will continue over the next months. Lawn edges are growing again as the weather has warmed up.

Roses have produced new growth with the warmth of spring. The first flush can be seen as the new buds appear.
